Quick Start

1

Install the Switch

- Remove the switch and parts from the box.
- Attach the enclosed brackets if you plan to mount the switch in a rack.
- Install the Intel® Express 535T Switch in a rack or on a shelf.
- Plug in the power cord.

Figure 1: Install the Switch

2

Connect the Devices

- All ports automatically detect the speed and duplex-mode of any connected device.
- Connect PCs and print servers to the switch with straight-through cables.
- Use a crossover cable to connect a switch to another switch or hub.
- Use only CAT 5 UTP cable to connect 100Mbps devices. To connect 10Mbps devices, use CAT 3, 4, or 5 UTP cable.

Figure 2: Connect the Devices

3

Check the Connections

- Check the port LEDs to confirm the link status.
- A solid green LED indicates a valid link.

Optional Information

4 Stack the Switch

- Unplug all power cords and use the included stacking cable to attach the 535T switch to one of the ports on the Intel® Express Stack Matrix Module installed in the 530T switch.
- Attach up to three switches to the module for a total stack height of four switches (one 530T and three 535T switches).
- The 535T switch must be connected to a stack matrix module (in a 530T switch) in order to form a stack. You cannot stack two 535T switches together.
- The 530T or 535T switches do not stack with the Intel® Express 510T or 520T Switches or the Intel® Express 550F or 550T Routing Switches.

Figure 4: Connect switches to the stack matrix module

Note: You cannot use the stacking cables or stacking modules from the 510T, 520T, 550T, and 550F switches to connect the 530T and 535T switches together.

5 Add Optional Modules

- Use optional modules to provide 100FX connectivity for the stack, or to extend the network beyond 100 meters.
- Unplug the power cord and remove the 10/100Base-TX module from the Module A expansion slot on the front of the switch.
- Align the new module with the card guides inside the switch and slide the module into the slot. Press firmly to connect the module.
- Secure the module using the retaining screws and plug in the power cord.

Connecting to Devices

Connection Guidelines

General

- The copper ports of the 535T switches are capable of autonegotiating port speed and can operate at 10Mbps or 100Mbps per port. The switch matches the highest possible speed of an attached device.
- The 535T's fiber modules always operate at 100Mbps.
- The 535T switches are capable of autonegotiating port duplex and can operate at half- or full-duplex.
- Configure the network so devices that talk primarily to each other are on the same segment. Each port is a single segment.

Cabling

- Use Category 5 unshielded twisted-pair (CAT 5 UTP) cable when connecting 100Mbps devices to the switch.
- Use Category 3, 4, or 5 unshielded twisted-pair (CAT 3, 4, or 5 UTP) cable when connecting 10Mbps devices to the switch.
- Limit the cable length between devices to 100 meters (328 feet).
- Use a straight-through cable to connect the switch to a server or workstation. For more information on cabling, see "Cabling Devices."
- To connect to another switch or hub use crossover cables.
- To connect a device to one of the fiber ports, use 62.5/125 μm multimode cabling. This cabling can be a maximum of 2,000m when operating at full-duplex, and 160m (to a hub) or 400m (to a router, switch, or PC) when operating at half-duplex.

Stacking with 530T Switches

Stacking Capabilities

The 535T can be used alone or in a stack. Stacking the 535T allows it to become a managed switch.

About a stack

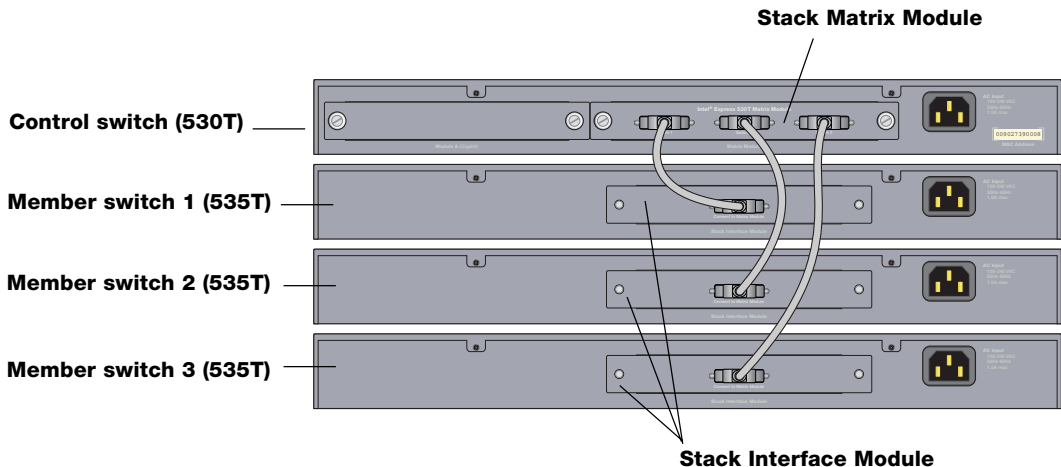

- To stack two or more 535T switches, you must have a 530T switch with the Stack Matrix Module installed.
- 535Ts can only be stacked with other 535Ts (and one 530T).
- A stack can consist of up to three 535Ts and one 530T.
- In a stack, the 535T switches are the member switches and the 530T is the control switch.
- The member switches are all managed through the console switch's management interface.
- The entire stack has one IP address (the control switch's IP address).

Assemble a stack

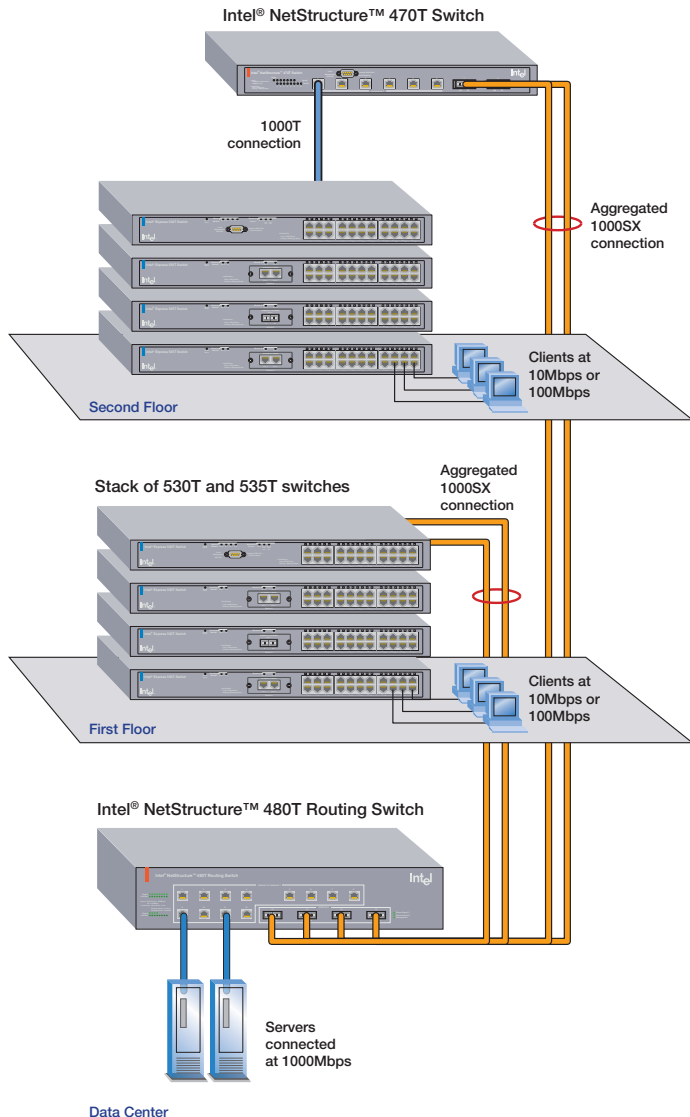

To stack 535Ts with a 530T, you need to purchase a Stack Matrix Module for the 530T.

- 1 Insert the Stack Matrix Module into the slot in the back of the 530T, labeled Matrix Module, and tighten the screws.
- 2 Run a cable from the slot in the back of the 535T, labeled Stack Interface Module, to the control switch's Stack Matrix Module, where it reads "Switch 1." This connection makes this 535T switch Member 2 in the stack.
- 3 Repeat step 2 until you have added all member switches (535Ts) to the stack. You can have a total of three member switches.
- 4 Power on the control switch.

Workgroup Example

The example below shows a sample network. The Intel® NetStructure™ 480T Routing Switch serves as the backbone of the network, and the stacks of 530T/535T switches provide the connection between the 480T and the users on each of the floors.

Cabling Devices

Media Requirements

Incorrect cabling is often the cause of network performance problems. The next two pages discuss the requirements.

100Base-TX

The 100Base-TX Fast Ethernet specification requires that you use CAT 5 UTP cabling to operate at 100Mbps. You're limited to 100 meters between any two devices. If you use lower grade cabling (CAT 3 or CAT 4), you may get a connection, but will soon experience data loss or slow performance.

10Base-T

The 10Base-T Ethernet specification allows you to use CAT 3, CAT 4, or CAT 5 UTP cabling. You're limited to 100 meters of cable between any two devices.

100Base-FX

The fiber ports of the 535T switch let you connect to a switch up to 400 meters (hubs up to 160m) away at half-duplex or up to 2 km at full-duplex. Use 62.5/125 μ m multimode fiber optic cable with an SC-type or MTRJ fiber optic connector.

Straight-through vs. Crossover Cables

Switch ports are wired MDI-X, so use a straight-through cable when connecting to a workstation or server. (Network adapter cards are wired MDI, not MDI-X.) For direct connection to another MDI-X port, use a crossover cable. Here are the pin arrangements for the switch's Ethernet port and the typical RJ-45 connector.

FAQs/Troubleshooting

I've connected the cable but the port LED is off. Why?

- Remove the cable and plug it in again. Wait up to six seconds for a link.
- Make sure you're using the correct type of cable (straight-through or crossover) for the device you want to connect to. If you're using the wrong cable, the link LED will not come on.
- Make sure the device you've connected to a port is a 10Base-T or 100Base-TX device. The Express 535T Switch doesn't support 100Base-T4 devices running at 100Mbps. However, they do support T4 devices running at 10Mbps.
- Check the speed and duplex settings on the PC's network adapter.
- The cable is defective.

I keep getting an intermittent loss of link (or data is not being transmitted). Why?

- You may be using the wrong grade of cable. The wrong cable can cause erratic performance and you may eventually lose the connection between the port and the attached device.
- A cable segment somewhere in your collision domain may be too long. Make sure no segment of your UTP cabling is longer than 100 meters.
- Check the Ethernet cable pairs. The TX pairs (pins 1 and 2) and the RX pairs (pins 3 and 6) should be twisted pairs. See diagram on page 24.

How can I set the speed or duplex on individual ports?

Normally the switch handles all connections automatically. If you need to force speed or duplex, (to accommodate older devices that don't support autonegotiation) the 535T switch will need to be part of a stack so you can use the Local Management on the Intel® Express 530T Switch to configure the port.

Beschränkte Hardwaregarantie (Nur für Europa)

Intel garantiert dem ursprünglichen Eigentümer, daß die in diesem Paket enthaltene Hardware keine Material- oder Herstellungsfehler aufweist. Diese Garantie gilt für drei (3) Jahre (a) nach dem Kaufdatum, wenn die ausgefüllte Registrierungskarte entsprechend den darauf enthaltenen Angaben zusammen mit einem Kaufnachweis eingendet wurde; oder (b) nach dem Herstellungsdatum; oder (c) nach dem Registrierungsdatum, wenn die Registrierung innerhalb von 30 Tagen auf elektronischem Weg durchgeführt wird. Diese Garantie entfällt, wenn die Hardware bei der Installation beschädigt wird. Intel empfiehlt, die Installation durch den Verkäufer der Hardware durchführen zu lassen.

INTEL BEHÄLT SICH DAS RECHT VOR, IHREN AUFTRAG MIT EINEM PRODUKT ZU ERFÜLLEN, DAS NEUE ODER ERNEUERTE KOMPONENTEN ENTHÄLT. OBIGE GARANTIE GILT ANSTELLE ALLER ANDEREN AUSDRÜCKLICHEN, STILLSCHWEIGENDEN ODER GESETZLICH FESTGELEGTEN GARANTIEEN. AUSGESCHLOSSEN SIND DAMIT AUCH UNTER ANDEREM ALLE GARANTIEEN FÜR DIE VERKEHRSFÄHIGKEIT, DIE VERLETZUNG DER RECHTE VON DRITTEN, DIE EIGNUNG FÜR EINEN BESTIMMTEN ZWECK ODER GARANTIEEN, DIE IM ZUSAMMENHANG MIT EINEM ANGEBO, EINER SPEZIFIKATION ODER EINEM MUSTER GEGEBEN WURDEN.

Diese Garantie schließt den Hardware-Ersatz bei Beschädigung aufgrund von Mutwilligkeit, Unfall, falscher Verwendung, Fahrlässigkeit, Umänderung, Reparatur, Katastrophen, falscher Installation oder unvorschriftsmäßigem Testen aus. Wenn das Hardwareprodukt aus anderen Gründen beschädigt ist, liegt die Entscheidung bei Intel, ob die Hardware mit Ausnahme der im folgenden beschriebenen Einschränkungen kostenlos ersetzt oder repariert wird. Hierzu müssen Sie das Produkt zusammen mit einer Rückgabenummer (RMA-Nummer, siehe unten) entweder (a) an den Verkäufer des Produkts oder (b) an Intel zurücksenden (bei Kauf in Europa muß das Produkt an "(a)" geliefert werden). Das Risiko des Verlusts oder der Beschädigung während des Transports liegt bei Ihnen als Käufer. Sie müssen zum Versenden die Originalverpackung (oder einen gleichwertigen Ersatz) verwenden und die Versandkosten übernehmen. Intel ersetzt die Hardware entweder durch ein neues oder ein neuwertiges Produkt. Das zurückgegebene Hardwareprodukt wird Eigentum von Intel. Intel garantiert, daß das reparierte oder ersetzte Hardwareprodukt für einen Zeitraum von: (i) neunzig (90) Tagen ab Rückgabedatum oder (ii) für die verbleibende Zeit der ursprünglichen Garantie von drei (3) Jahren frei von Material- und Herstellungsfehlern ist. Dabei gilt jeweils der längere Zeitraum.

Mit dieser Garantie erhalten Sie bestimmte Rechte, die je nach Staat durch weitere Rechte ergänzt werden können. Alle Teile oder Komponenten dieses Hardwareprodukts werden durch die beschränkte Hardwaregarantie von Intel abgedeckt. Das Hardwareprodukt kann vollständig getestete, wiederverwendete Teile enthalten, die derselben Garantie wie neue Produkte unterliegen. Informationen zur Garantie erhalten Sie unter einer der Intel Kundendienstnummern, die am Ende dieses Handbuchs zu finden sind.

Nachdem die Beschädigung vom Kundendienst bestätigt worden ist, wird von der zuständigen Abteilung eine Rückgabenummer (RMA-Nummer) ausgegeben, die auf der äußeren Verpackung der Hardware angebracht werden muß. Intel akzeptiert kein Produkt ohne RMA-Nummer auf der Verpackung.
